### **DETAILED ACTION**

Page 2

## Claim Objections

1. Claims 1-6 are objected to because of the following informalities: Applicant claims devices of being capable of performing tasks in functional language. Appropriate correction is required.

# Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pepper (U.S. Patent 20020153497) in view of Tajima (U.S. Patent 5,768,000).
- 3. Regarding claims 1 and 7, Pepper discloses (Fig. 2) a system for controlling an optical imaging system capable of providing an image of a target, the system comprising: a reflector (28) capable of reflecting light representative of the image provided by the optical imaging system, wherein the reflector is capable of being adjusted in at least one direction based upon movement of the image provided by the optical imaging system (Paragraph [23]); an optical amplifier (30); and a tracking device (34) capable of receiving the light from the optical amplifier such that the reflector can be driven to a position in at least one direction based upon an image of the target represented by the light received by the tracking device (Paragraph [23]). Pepper does

Application/Control Number: 10/619,050 Page 3

Art Unit: 2878

not disclose the optical amplifier with a variable gain based upon the intensity of the reflected light. Tajima discloses (Col. 1, Lines 5-10) an optical amplifier whose gain is controlled based on an optical intensity of light. It would have been obvious to a person of ordinary skill in the art at the time of the invention to have an optical amplifier with a variable gain based upon the intensity of the reflected light to provide better signal strength.

## Allowable Subject Matter

- 4. Claims 14-16 are allowed.
- 5. The following is an examiner's statement of reasons for allowance: Prior art discloses the invention set forth above.' Prior art does not disclose selecting a gain of an optical amplifier based upton the comparison such that the optical amplifier can amplify the intensity of the reflected light with the selected gain, and the thereafter the reflector of the tracking system can be driven to a position based upton an image of the target represented by the reflected light with amplified intensity.
- 6. Claims 2-6 and 8-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter: Prior art does not teach a tracker controller capable of controlling the gain of the optical amplifier based upon at least one measurement of the intensity of the light

Application/Control Number: 10/619,050 Page 4

Art Unit: 2878

received by the tracking device, wherein the tracker controller is also capable of driving the reflector to the position in at least one direction.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tony Ko whose telephone number is 571-272-1926.

The examiner can normally be reached on Monday-Friday 7:30 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Georgia Epps can be reached on 571-272-2328. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
